

Brief instructions: **NOMO Professional** "Ready to use"

- 1) Spray **NOMO Professional** directly over the mold infested area. Since the mold may already have spread invisibly, spray the surrounding area as well (approx. 20-30cm).
- 2) Leave **NOMO Professional** to act for about 15-20 minutes so that the mold becomes inactive.
- 3) Then clean the infested area with water and a sponge, brush and/or pressure washer.
In some cases, the mold will leave stains or residue. If a bleach or other product is used for removal, rinse very thoroughly to ensure no residue remains.

Allow the surface to dry completely before proceeding to step 4.

- 4) Reapply **NOMO Professional** to create an anti-mold barrier. Spray **NOMO Professional** as a fine mist. Avoid dripping! Allow **NOMO Professional** to dry completely.

IMPORTANT:

- ⇒ Do not apply **NOMO Professional** in the rain or in direct sunlight apply.
- ⇒ Before attempting to remove the mold, first treat the mold-infested area with **NOMO Professional**
- ⇒ When you scrub a mold-infested surface, the mold spores are thrown into the air and circulate around the room, settling in, allowing the mold to spread further and grow again.
- ⇒ Treating the mold spores with **NOMO Professional** beforehand eliminates this risk.

Example of a sprayer you will need.
The sprayer must be completely clean and must not contain any chemical residues.
